

## Sprint 2 Retrospective

### *Start Doing:*

- Start allocating 3–4 dedicated days at the end of the sprint for debugging, integration, and error fixing.
- Start performing continuous integration (merging code frequently) instead of waiting until the end.
- Start writing small integration tests every time a feature is completed to avoid last-minute issues.

### *Stop Doing:*

- Stop assuming that just because features work individually, they will work together without testing

### *Continue Doing:*

- Continue developing feature-wise — it's a major improvement from Sprint 1.
- Continue following the order Database → Backend → Frontend, which made development more structured.
- Continue improving communication and coordination between teams.
